ADVANCED SAFETY TECHNOLOGY

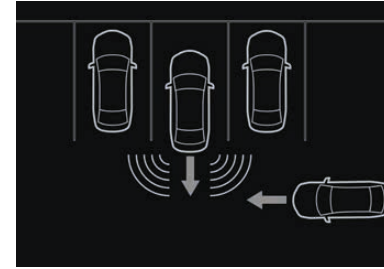

SMART CITY BRAKE SUPPORT (SCBS)
Designed to make busy city traffic more relaxing for the driver, Mazda's Smart City Brake Support (SCBS) helps to avoid or minimise the risk of low-speed collisions, the most common type of city traffic accidents. The laser-based system monitors the gap and closing speed of the vehicle in front, as well as other detectable objects, automatically applying the brakes if a collision is likely at speeds of up to approximately 50mph.

Not available on SE-L models.

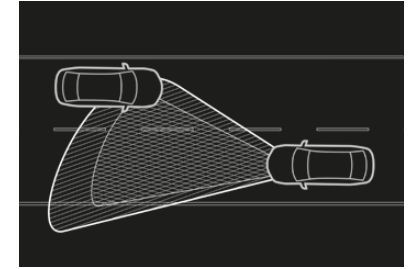

BLIND SPOT MONITORING (BSM)
Warns you of a vehicle entering a detection zone situated up to 50 metres behind, by activating a door-mirror mounted warning light on the relevant side of the vehicle. If you then indicate prior to turning in that direction, the warning light flashes and an audible alert sounds. Working at speeds as low as 20mph, the system can prevent drivers from moving into the path of a following vehicle.

Standard on Sport Tech and GT Sport Tech models.

REAR CROSS TRAFFIC ALERT (RCTA)
Designed for when the vehicle is reversing, to prevent possible collisions with unseen vehicles. An alarm alerts you of any vehicles or obstacles approaching from either side of the rear of the car, and silences once the area is clear.

Standard on Sport Tech and GT Sport Tech models.

ADAPTIVE LED HEADLIGHTS (ALH)
Designed to work at night, the system automatically analyses vehicles ahead or those approaching in the opposite direction, and automatically switches between high and low beams by switching individual LED bulbs on and off as necessary. This makes it possible to drive with the high beam on at all times, significantly improving visibility when driving at night, without dazzling drivers of other vehicles.

Standard on Sport Tech and GT Sport Tech models.
