ADVANCED SAFETY TECHNOLOGY

SMART BRAKE SUPPORT (SBS) WITH TURN-ACROSS TRAFFIC

For the first time in a Mazda, SBS now includes a Turn-Across Traffic function to help prevent collisions when turning across traffic at junctions. When turning right at a junction, the forward-sensing camera and millimetre wave radar sensors monitor oncoming traffic. When the system determines there is a chance of a collision occurring, it automatically applies the brakes to help prevent impact or mitigate damage that may occur. Programmed to monitor nearby vehicles, the function only operates at low speeds.

EMERGENCY LANE-KEEPING WITH ROAD KEEP ASSIST

When travelling at speeds of over approximately 37 mph, the forward-sensing camera monitors kerbs, grass and other natural verges along the edges of unmarked roads. When the system determines there may be a chance of the vehicle drifting off the road, it assists the driver with preventative steering operations.

EMERGENCY LANE-KEEPING WITH BLIND SPOT ASSIST

The system uses 24GHz millimetre wave radar sensors to monitor the areas behind and to the sides of the car when travelling at speeds of over 37 mph. If the driver steers to change lanes when there is a threat of colliding with a vehicle approaching from the rear, the system assists steering operations to help prevent impact or mitigate damage that may occur.
